### **Univa - Workload Management on-premise and in the Cloud**

The UNIVAC I was designed as a commercial data-processing computer, intended to replace the punched-card accounting machines of the day. It could read 7,200 decimal digits per second (it did not use binary numbers), making it by far the fastest business machine yet built. Its use of Eckert's mercury delay lines greatly reduced the number of vacuum tubes needed (to 5,000), thus enabling the ...
