### Where does the moon go? - By kevin griffin

A roughly sketched boy, his dog, and some curious raccoons are instructed by an owl wearing binoculars. Such questions as, "What is the moon?", "What is it like on the moon?", "What does gravity do?", and "... why does the moon look different on different nights" are given short answers of just a few sentences.

### Where Does the Moon Go? (Question of Science Book): Rosen ...

The Moon is an astronomical body that orbits Earth as its only natural satellite. It is the fifth-largest satellite in the Solar System, and by far the largest among planetary satellites relative to the size of the planet that it orbits (its primary).

### Moon - Wikipedia

Moon doesn't go anywhere during the day. It keeps on orbiting the earth as usual. We normally see the moon during night because Sun's bright light doesn't allow us to see fainter objects. However, moon is an exception to that because moon is a very big astronomical body and very close to earth.

### Where does the moon go in the day? - Quora

During this part of the Moon cycle it is getting closer to the Sun as viewed from Earth and the night side of the Moon is facing the Earth with only a small edge of the Moon being illuminated. This phase is best viewed an hour or 2 before the sunrise and can be quite beautiful if you're willing to get up early.

### Today's Moon Phase | Current moon cycle for today and tonight

The Moon orbits Earth in the prograde direction and completes one revolution relative to the stars in about 27.32 days (a sidereal month) and one revolution relative to the Sun in about 29.53 days (a synodic month).

### Orbit of the Moon - Wikipedia

At New Moon, the Moon lies in the same direction as the Sun. But the Moon is orbiting around the Earth; every day, it moves eastwards (further left from the Sun) by about 12 degrees. This means that it increasingly lags behind the Sun, by about 50 minutes a day.

### What's the Moon doing?

Pin It! You may be surprised to learn that, more often than not, the Moon rises in the east and sets in the west; however, depending on the phase of the Moon and the time of the year, the rising might actually occur in the east-northeast or east-southeast, and the setting might take place in the

west-northwest or west-southwest.
