Wind Load Calculations This presentation will focus on wind load calculations using AS1170.2 and ASCE 7, two leading wind load codes commonly used in international projects. Methodologies of wind load calculations will be presented and then applications using both codes will be discussed and contrasted.

Wind Load Calculations | Engineers Australia

This Standard sets out procedures for determining wind speeds and resulting wind actions to be used in the structural design of structures subjected to wind actions other than those caused by tornadoes. The Standard covers structures within the following criteria: (a) Buildings less than or equal to 200 m high. (b) Structures with roof spans less than 100 m. (c) Structures other than offshore ...

Recent wind events in Australia and overseas have caused catastrophic results in those affected areas, with deaths being reported as well as widespread destruction. Research and information gathered from these events have been incorporated into the latest edition of AS/NZS 1170.2-2011 to now represent a more realistic determination of wind actions. The Standard applies to structures ranging ...
